Related Deaths in
Cuyahoga County**

2019 DRAFT JANUARY UPDATE

February 1, 2019

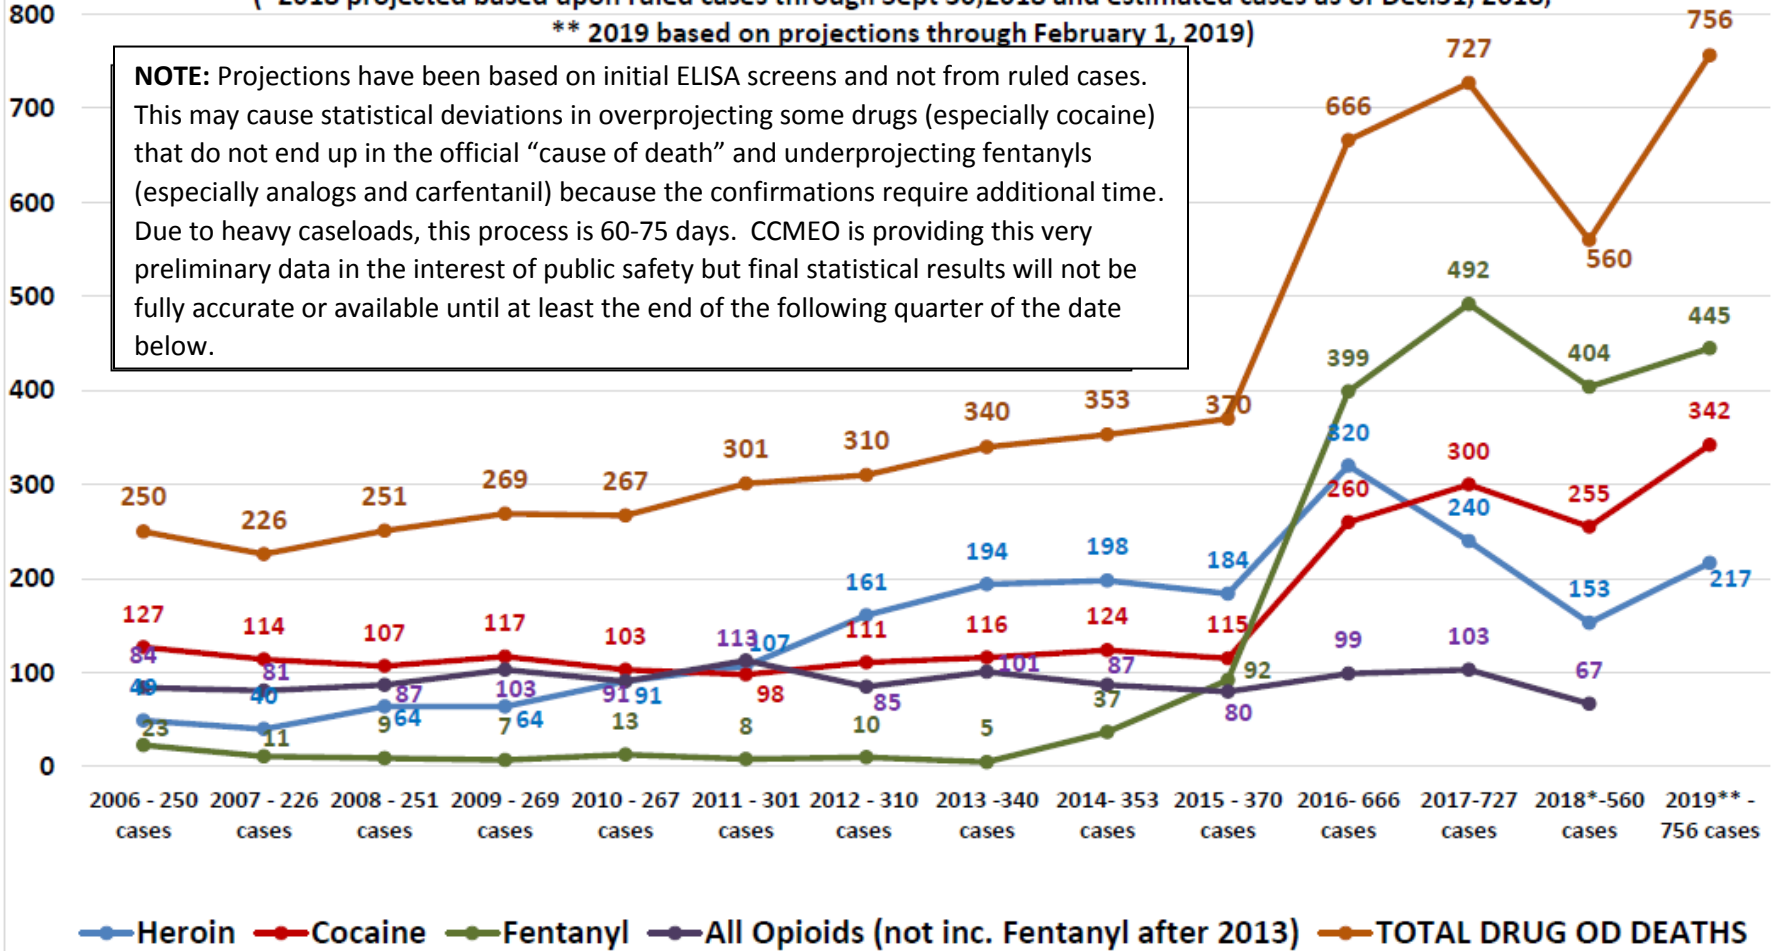

Cuyahoga County Overdose Deaths 2006-2019**

Most Common Drugs

(* 2018 projected based upon ruled cases through Sept 30, 2018 and estimated cases as of Dec. 31, 2018;

** 2019 based on projections through February 1, 2019)

NOTE: Projections have been based on initial ELISA screens and not from ruled cases. This may cause statistical deviations in overprojecting some drugs (especially cocaine) that do not end up in the official "cause of death" and underprojecting fentanyl (especially analogs and carfentanil) because the confirmations require additional time. Due to heavy caseloads, this process is 60-75 days. CCMEO is providing this very preliminary data in the interest of public safety but final statistical results will not be fully accurate or available until at least the end of the following quarter of the date below.

VICTIMS

Victims' ages range from 20 - 80

40 Male victims; 13 Female victims

15 African American victims; 38 Caucasian victims (2 hispanic victims)

TRENDS

At least **53** victims have died from heroin/fentanyl/analog or in combination through January 2019. This compares to 37 in 2018 and 52 in 2017 for the worst January on record. 2019 total is at least **57** fatalities when including cocaine as well.

Carfentanil: 191 FATAL CASES in 2017; 24 confirmed cases in 2018; 6 confirmed in 2019 as of 2/1/19

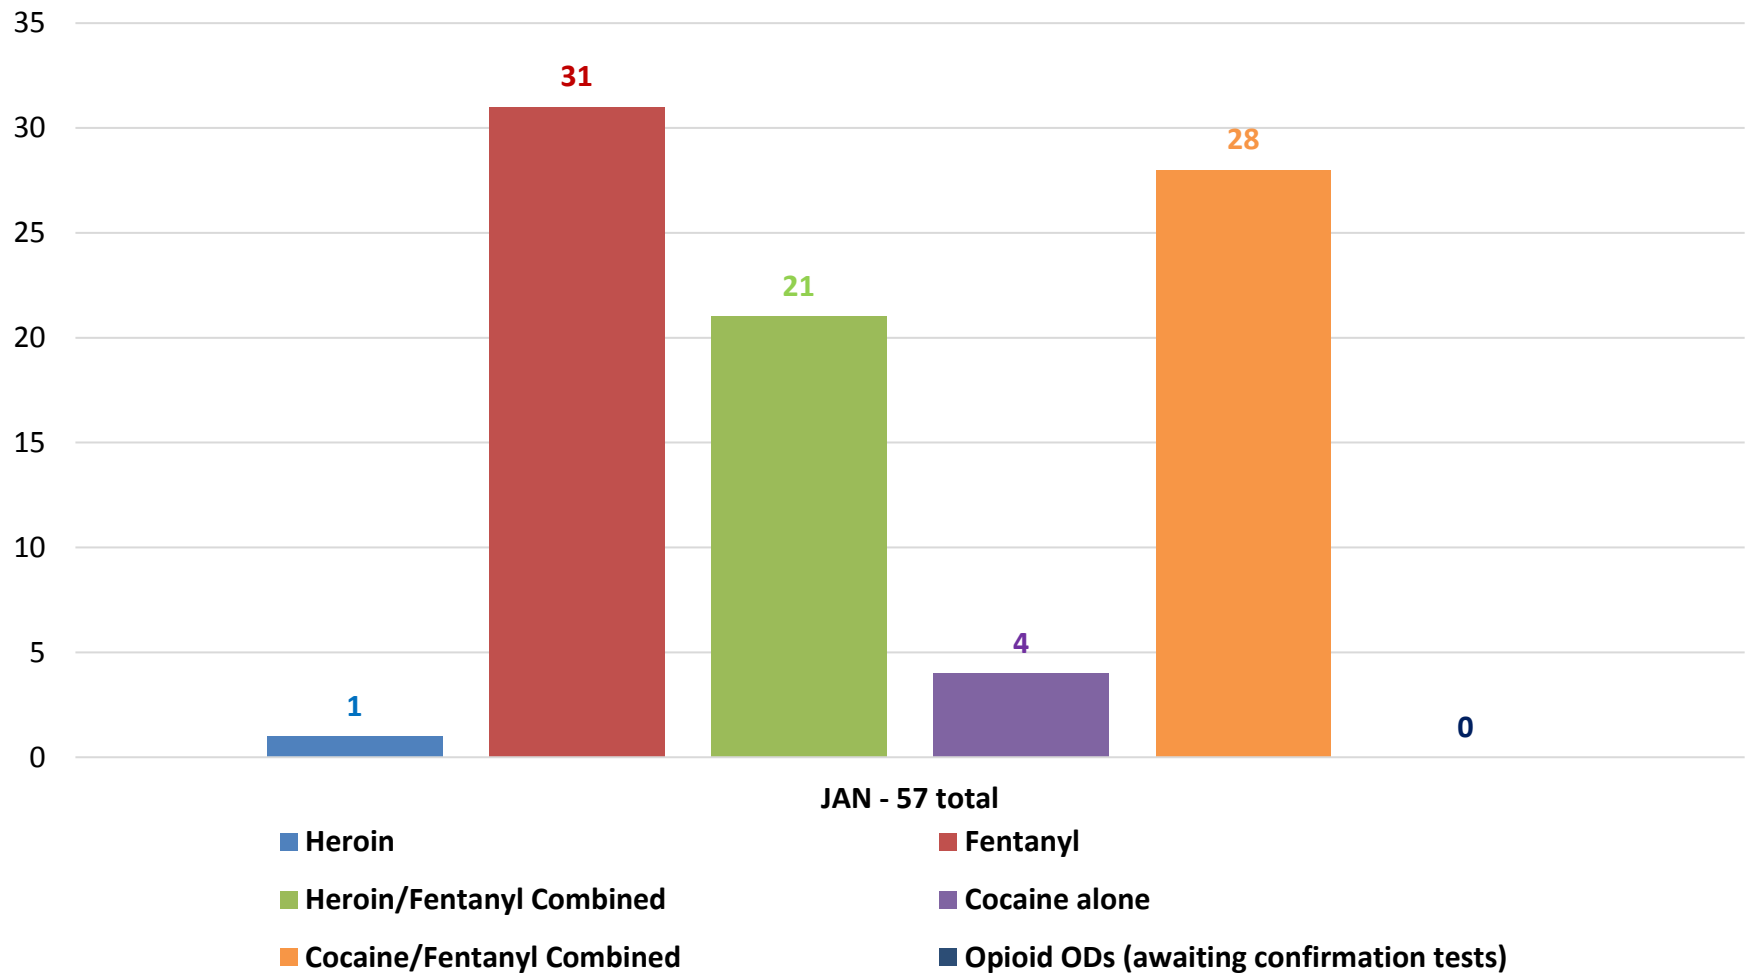

Rate of African American deaths involving fentanyl is 28.3% of all victims so far in 2019, a rate above 2016 (14.5%), and higher than the 20.33% in 2017 and 21.11 in 2018. As many as 32 cocaine related deaths occurred in January 2019 with as many as 28 being mixed with Fentanyl, Heroin or both.
